Topic:- Adding And Removing Elements In A Set

Interview Related Questions

1. How do you add a single element to a set?

Definition:

Adding a single element means inserting one new value into the set.

Syntax:

```
set_name.add(element)
```

Example:

```
s = {1, 2, 3}
s.add(4)
print(s)
```

2. How do you add multiple elements to a set?

Definition:

Adding multiple elements means inserting more than one value at a time into the set.

Syntax:

```
set_name.update(iterable)
```

Example:

```
s = {1, 2}
s.update([3, 4, 5])
print(s)
```

3. What is add() in Python set?

Definition:

add() is a method used to insert a single element into a set.

Syntax:

```
set_name.add(element)
```

Example:

```
s = {10, 20}  
s.add(30)  
print(s)
```

4. What is update() in Python set?

Definition:

update() is a method used to insert multiple elements (list, tuple, or set) into a set.

Syntax:

```
set_name.update(iterable)
```

Example:

```
s = {1, 2}  
s.update((3, 4))  
print(s)
```

5. How do you remove an element using remove()?

Definition:

remove() deletes a specific element from the set. It gives an error if the element is not present.

Syntax:

```
set_name.remove(element)
```

Example:

```
s = {1, 2, 3}  
s.remove(2)  
print(s)
```

6. What is discard() in Python set?

Definition:

discard() removes an element from the set without giving an error if the element is not found.

Syntax:

```
set_name.discard(element)
```

Example:

```
s = {1, 2, 3}
s.discard(5)
print(s)
```

7. How do you remove a random element using pop()?

Definition:

pop() removes and returns a random element from the set.

Syntax:

```
set_name.pop()
```

Example:

```
s = {10, 20, 30}
s.pop()
print(s)
```

8. What is clear() in Python set?

Definition:

clear() removes all elements from the set and makes it empty.

Syntax:

```
set_name.clear()
```

Example:

```
s = {1, 2, 3}
s.clear()
print(s)
```

9. How do you delete a set completely?

Definition:

Deleting a set means removing the entire set object from memory.

Syntax:

```
del set_name
```

Example:

```
s = {1, 2, 3}
del s
```

10. Write a program to add and remove elements from a set.**Definition:**

This involves performing both insertion and deletion operations on a set.

Example:

```
s = {1, 2, 3}
```

```
# Add elements
```

```
s.add(4)
```

```
s.update([5, 6])
```

```
# Remove elements
```

```
s.remove(2)
```

```
s.discard(10)
```

```
s.pop()
```

```
print(s)
```
