

Solution Code:

```
print("Population Growth Tracker")

population = int(input("Enter initial population: "))
rate = int(input("Enter growth rate: "))
years = int(input("Enter years: "))

i = 1
while i <= years:
    increase = population * rate / 100
    population = population + increase

    if population > 1000000:
        print("Overpopulated")
    else:
        print("Normal population")

    i = i + 1

print("Final population:", population)

if population < 0:
    print("Invalid data")
else:
    print("Data valid")
```

Output:

```
"C:\Users\Parth Soni\PycharmProjects\PythonProject\.venv\Scripts\python.exe" "C:\Users\Parth Soni\PycharmProjects\PythonProject\solution.py"
Population Growth Tracker
Enter initial population: 1000
Enter growth rate: 10
Enter years: 3
Normal population
Normal population
Normal population
Final population: 1331.0
Data valid

Process finished with exit code 0
```

The Error code

```
print("Population Growth Tracker")

population = int(input("Enter initial population: "))

rate = int(input("Enter growth rate: "))
